

PROLINE FORMWORK AND INSTALLATION BITS

Only for use in rotary drilling applications, so without percussion. Deactivate impact.

For drilling holes in unreachable places, the Hikoki formwork and installation drill bits are indispensable at every construction site. The drills meet the safety requirements of the Professional Trade Association for wood registered in DIN 7490.

The drill bits, made from High Quality Chrome-Vanadium Steel, enable optimum drilling results in wood, plasterboard as well as boards made from plaster and light-weight materials.

The shafts with the SDS-Plus connection are fully hardened for extended lifetime of the tool.

The top angle of 118° ensures a fast and easy penetration into the material and the big open and tapered flute provide a good chip removal, preventing the drill from getting jammed, even in damp wood.

Recommended applications:

Wide range of applications, both for the building trade (formwork) and for interior fitting work, plumbing, heating and electrical installation. Formwork, boards, planks, beams, plasterboard, light building materials and insulations.

User instructions: For use in all drills with 13 mm drill chuck.
